

Room Configuration

If possible, the following room setup works best for my presentation. However, if there are reasons the room must be setup differently, that's fine I can work with whatever you have:

1. The preferred room setup is wider than it is long. If the room is set up long like a bowling alley, I find there to be less participation. If it is set up wide, everyone is closer to the front and usually more willing to interact. Please see example of desired setup below:

2. Table seating is preferred – if possible round tables that are only 80% full work best. This way no one has to have their back to the presentation. Please see example below:
